

Benzene

Why am I being warned about potential exposure to benzene?

- Benzene is on the [Proposition 65](#) list because it can cause cancer and birth defects or other reproductive harm.
- Exposure to benzene can cause leukemia.
- Exposure to benzene during pregnancy may affect development of the child. It may also harm the male reproductive system.
- Proposition 65 requires businesses to determine if they must provide a warning about exposures to [listed chemicals](#).

What is benzene?

- Benzene is a colorless and highly flammable liquid with a sweet smell. It evaporates into the air quickly.
 - ▶ Benzene, while not in the final product, is used in the manufacture of drugs, dyes, insecticides, plastics, resins, rubber, detergents, and other chemicals.
 - ▶ Benzene is present in natural gas and petroleum products such as crude oil and gasoline.
 - ▶ Gasoline, motor vehicle exhaust and industrial emissions are major sources of benzene in the air.
 - ▶ Tobacco smoke contains benzene.

How does exposure to benzene occur?

- During pregnancy, benzene can pass from the mother to the baby.

How can I reduce my exposure to benzene?

- ⊗ Do not smoke. Do not allow children to breathe tobacco smoke.
- ✓ Limit your and children's contact with gasoline and its fumes.
 - ▶ Pump gasoline carefully to avoid exposure to liquid and fumes. If possible, stand a few steps away from the gasoline-pump nozzle while filling your car.
 - ▶ Limit time spent near idling car engines.
 - ▶ Do not idle car engines in attached garages.
- ✓ Ventilate homes and attached garages well to get fresh air.
- ✓ If you use well water, have it tested for benzene contamination. (If your water comes from a public supplier, it is already tested regularly for benzene).
- ✓ If you think you may have a natural gas leak in your home, such as a low-level leak associated with any natural gas-powered appliance, have it inspected and fixed. If there is a strong gas odor, leave the building immediately.
